

Quantum Sail Scan powered by Vspars is a simplified version of the very powerful Vspars real time sail scanning tool. The user will have the ability to import any picture taken with any camera of any sail to quickly and easily digitize the flying shape.

The programs powerful features includes:

1. Set zero twist position based on any two points
2. Choose as few as four points on any camber and the program will spline the rest of the curve
3. Compare multiple scans over laid on each other
4. Ability to add notes regarding sail trim, wind speed and rig tune to every picture
5. Export data to PDF files
6. Data coincides with Quantum Sail Design program data
7. Available to anyone
